CATHOLIC CHURCH IN ITALY SOON MAY BE BROKEN UP

MILWAUKEE, Wis., April 25.—The disestablishment of the Catholic church in Italy, within a few years, was predicted by Most. Rev. Sebastian G. Messmer, archbishop of Milwaukee in an interview today. Everything now, he said, points to the event. The government is distinctly unfriendly to the church, and the church having no voice in national matters, is powerless to avert a condition in Italy that will be but a repetition of the conditions now existing in France.

Archbishop Messmer's statement was called forth in commenting upon an interview given the Evening Wisconsin by Rev. F. H. Wright, for six years a missionary for the Methodist Episcopal church in Italy, saying there was a strong anti-clerical feeling in that country; that the people were tiring of the domination of the church and were drifting from the church into infidelity and anarchism, marking a field ripe for Methodist missionary endeavor. The Rev. Mr. Wright said that 85 per cent of the people of Southern Europe could neither read or write; that the Catholic church of Italy was in its native environment and was the pattern of what the church would be in the United States were it not for the progressive ideas of the American people.

"I would not be at all surprised," said Archbishop Messmer, "to see a disestablishment of the church in Italy within a few years. The government is anything but friendly to the church, and from late indications I believe that it is intent upon the same action that has already taken place in France. The government for years has been the enemy of the church, Catholics in Italy, by royal decree, are barred from voting in national questions and there is no use in the government favorable to the church."

"The second reason for the religious difference—and here I am speaking only of Southern Europe—is the neglect of the clergy to give the people proper religious instruction. The people are ignorant of the principles of their religion. They do not understand it; they have gone to church from habit and not from principle and consequently they have drifted away since this anti-religious sentiment has gone abroad in the land."

"The church has not had her own way in Italy for forty years save in the Roman states. The pope cannot appoint a bishop without the approval of the government. If a bishop is appointed who it is believed would be unfavorable to the government, the government will not pay his salary, and without pay how is he to live? But often the government is mistaken and approves the appointment of most excellent men. I have been told, though of this time I have no knowledge of my own, that the church taken by members of the Catholic

NOVEL CURE FOR PARALYSIS Write With Left Hand and Stimulate Brains Equally

BERLIN, April 25.—"Man must become ambidextrous," declares Professor Manfred Fraenkel, Berlin's celebrated authority on the brain. "He must be taught to employ his left hand as frequently and as adroitly as his right hand."

"Then both hemispheres of his brain will be equally developed, equally nourished, will send forth equally powerful nerve stimulation. And if the left half of his brain be damaged by injury or disease, the right half, having been constantly stimulated by active use, will continue to act. So the number of men plunged in intellectual gloom or rendered helpless by paralysis will be vastly decreased."

Such, in effect, is Professor Fraenkel's newest utterance on the benefit of ambidexterity—using both hands. His argument becomes perfectly clear to every one who calls to mind that the left half of the brain governs the right side of the body and vice versa. This is because the great nerves starting from the brain hemisphere cross each other near their origin. He goes even further and makes the astonishing statement that many cases of seeming paralysis can be cured by the simple expedient of teaching the sufferer to use the left hand.

He tells of a patient whose tongue, right hand and right side were paralyzed, but who recovered his power of speech by constantly practicing writing with his left hand. This patient suffered a second stroke of paralysis which robbed him of all sensitiveness but did not deprive him of speech.

Fraenkel reports another case, that of a 13-year-old boy who lost his left hand from a gunshot wound. When he was 30 he became paralyzed on the right side and, besides, lost the power of speech. He had an artificial left hand. He was a miserable object. Professor Fraenkel and Doctor Gutzmann fixed a ring of wood with a spring on his artificial hand and began to teach him to write with it. This stimulated the right lobe of his brain, and in a short time he found himself able to speak, not only his mother tongue (German), but he learned French and Russian.

To have perfect health we must have perfect digestion, and it is very important not to permit of any delay the moment the stomach feels out of order. Take something at once that you know will promptly and unfailingly assist digestion. There is nothing better than Kodol for dyspepsia, indigestion, sour stomach, belching of gas and nervous headache. Kodol is a natural digestant, and will digest what you eat. Sold by Hanna's Drug Store, 228 Broad street.

MULE A CONTOERTIONIST
Plants His Hind Hoof in Face of Man in Front of Him

If anyone had told Tom Draper, barn foreman at the city's street cleaning barns, in Shelby street, before yesterday that there was anything in mule-ology that he did not know, the answer would doubtless have been a quick and emphatic denial. He is said to admit that possibly he is just beginning to learn the real invariables of a mule's capacities and capabilities. He now knows a mule that has starred as a contortionist.

Draper was standing in front of one of the new mules at the barns yesterday, putting on a bridle and conversing pleasantly with the mule about the prospects of more weather. Suddenly the mule—which until that time had shown a gentle, comradely disposition, apparently free from guile—without a bit of warning and in an extremely offensive manner, reached forward with one of his hind legs and swatted Draper a blow in the face. The mule landed squarely and Draper all but took the count. When he finally staggered into the barn office, with nose streaming blood and nearly dislocated and a few of his best teeth clinging desperately to their moorings for fear of falling out, he had a few things to say about mules that were better left unsaid.

That mule is almost an object of veneration to the negroes that work at the barns. They have prided themselves on their knowledge of mule capabilities, but a mule that stands in front of you and reaches out with his hind leg and strikes you deftly in the face is built on a new model. This particular mule has not yet been named, as he belongs to a lot that was recently brought to the city from up-state. When it comes to a christening, it has been suggested that he be named Herrmann the Great, because of his dexterity at sleight-of-hand.—Indianapolis News.

BLACK HAWK VEIN SUPERIOR & BOSTON

AFTER A TWO MONTHS' VISIT IN GLOBE, SECRETARY RICE TALKS OF DEVELOPMENT AND FUTURE OF PROMISING PROPERTY.

Secretary William G. Rice of the Superior & Boston Copper company has returned to Houghton after a stay of nearly two months at the property at Globe, during which time he has witnessed a number of important developments that make the future of Superior & Boston appear brighter today than at any time in its career.

The highest expert opinion has been rendered that the Black Hawk vein is as strong a fissure vein as is found in the northwest portion of the Globe quadrangle, this comparison placing it in the class of the best veins of Globe. The developments of the last six weeks show the vein not only to be persistent, but that it contains ore of high commercial value on the Superior & Boston property.

The Great Eastern shaft, through which the Black Hawk vein is worked,

is bottomed at 427 feet, which corresponds to the lowest level of the neighboring Arizona Commercial mine, the shafts of the two companies being only 175 feet apart. From the bottom level of the Superior & Boston workings there is a winze being pushed with all speed 100 feet from the end line, and from the bottom level of the Arizona Commercial that company has a winze 35 feet from the boundary, which is 55 feet deep and stopes have been worked on the bottom level by the Arizona Commercial to within ten feet of the Superior & Boston boundary.

On the Superior & Boston property this ore body has been proven to extend 250 feet from the boundary in the lower level, by the drift at that depth, which extends to the boundary and there connects with the Arizona Commercial drift, affording excellent ventilation for both companies. Stopping and shipments from that level began last week. The ore shoot is six to ten feet wide and is expected to average not less than 7 per cent.

The Black Hawk vein dips at an angle of 55 degrees and cannot be advantageously worked to greater depth by the Great Eastern shaft. When the relative position of the ore masses have been more fully demonstrated and the value of the Iron ledge cross fissure

has been determined, a permanent shaft of large capacity will be opened to command all mineral ground in that part of the Superior & Boston property.

Just Because
Your cough is only in the throat and does not trouble you now, don't think that it needs no attention. When it has not had much of a start is the time to check it. The slightest cough easily leads to Pneumonia, Bronchitis and Consumption. A bottle of Ballard's Horehound Syrup will cure that cough. The price puts it within reach of all. Sold by Palace Pharmacy.

INGRAM'S

Men's and Young Men's Outfitters

A tremendous ovation has been accorded this popular store during the last week to take advantage of the New Spring Styles that have made such a magnificent display in our Clothing department. Those smart dressy Suits, so distinctively new and stylish, with their large lapels, patch pockets, natty cuff covers, and "sporty" Trousers, have been drawing features of the week's trade. The large stock still contains a complete assortment, and all are invited to inspect the goods to get right understanding of what constitutes correct clothes, even if not yet ready to buy.

HATS NEXT Straws Panamas Felts

IN STRAW HATS the Sailor style still holds the lead. The adaptation of this shape to the physiognomy of the masses causes it to continue a favorite with everybody. Who does not look well in a neat nobby Sailor straw? Our stock embraces a variety that will enable you to suit your taste, both in shape and price—\$1.50 to \$5.00.

IN PANAMAS the TELESCOPE and the GRAECO command the attention of all devotees of Fashion. They are SNAPPY and SWELL. They are BECOMING and DRESSY. They are designs that will last. If you get a genuine Panama its wearing qualities will prove the wisdom of your purchase. Ours are cheap at \$7.50 to \$10.00 and you will always have a hat that for summer wear will give you a feeling of being dressed right.

IN FELTS our assortment still leads any stock in Globe. It will be easy for you to select just what you want in any of the following blocks: ROELOF, KEITH or STETSON. All these are too well known to need comment. We have them in Black, Brown and Tan, all shapes, and at prices that will accommodate your pocketbook.
